But, to place the subject within the reach of those who may not be very familiar with Algebra and Geometry, we shah give an explanation which can easily be understood by those whose mathematical knowledge does not extend beyond the operations of Arithmetic. An Arithmetical Progression is a series of numbers which increase or decrease by a common difference. The series of natural numbers, 1, 2, 3, 4, -. is of this kind; so is also the series of numbers, 1, 3, 5, 7, 9, 11, c. Here the common difference is 2; but it may be any number, whole or fractional. It is a property of this series, that double of any term is the sum of the two adjoining terms, so that an arithmetical mean between two numbers is half their sum. A geometrical progression is a series of numbers which increase by a common multiplier, or decrease by a common divisor, called their ratio. The series 1, 2, 4, 8, 16, 32, 64, c. is of this kind. Here the ratio, is 2, but it may beany number, whole or fractional. In a geometrical series, the square of any term is the product of the 2 adjoining terms: and hence, a geometrical mean between two numbers, is the square root of their product. To proceed with our theory, let us suppose the terms of any continued geometrical progression, which begins witli unity, and the terms of...
